

Henry M Rowan College of Engineering summer camps COVID Protocol

COVID-19 UPDATE: The status of in-person camps may change at any moment depending upon CDC, State and University guidelines at that time. Camps would then switch to virtual or be cancelled.

- All camps will be limited to **18 campers**. The STEM Lab in Rowan Hall is a large room which will allow us to space out the campers. We will maintain 6 foot social distancing at all times. There will be a limit of 2-3 campers per table.
- Masks will be worn inside during instruction. We will provide “mask breaks” for any campers that need some fresh air. We will also provide masks should any campers need them.
- Each day at check-in, campers or their parent/guardian will be required to complete the Rowan University Daily Screening as well as campers having their temperature taken. This will ensure proper contact tracing protocol should a camper test positive for COVID.
- Should a camper test positive, the remainder of the camp will be cancelled.
- Students will have all of their supplies at their table or in kits that they will pick up from a sanitized area to avoid person to person contact. All students will have their personal set of supplies, materials, computers, etc. Nothing will be shared. Personalized areas will be assigned for in-work projects that are left overnight and to be completed the following day.
- Camps will be scheduled for the mornings to eliminate food consumption during this year’s camps. Water bottles can be brought and will remain on camper’s tables.
- Rowan University cleaning protocols will be adhered to each night, after campers leave and prior to their return the following day.
- After each camp ends, all camp materials will be cleaned and sanitized.
